Semi-Mobile System

In this installation the Semi-Mobile System is placed next to an elevator shaft for secure and efficient use. Each Semi-Mobile System contains a DC 5900 and with the availability to add a pre-separator. In this case it is combined with a DCF Storm. Using a Semi-Mobile System increases the accessibility to a powerful dust extractor on each floor. A Semi-Mobile System is easy to install and guarantees efficiency and flexibility.

DC 5900

Part No 119320

DCF Storm

Part No 70701

Hose

Part No 2024

The dust is collected directly at the source and conveyed by the hose system from each floor to the central dust extractor. Larger particles can be separated in a pre-separator, while the smallest and most dangerous dust particles are collected in the fine filter in the central unit.

Easy to install and operate

Semi-mobile dust collection systems are a practical solution when work is to be carried out on several floors and by several users at the same time. Each floor is connected to a central extraction system via a hose connection package and is equipped with a connection point for connecting the suction hose to the machine being used. A Ø76 /3" hose that forms the main line is taken up through, for example, a lift shaft, refuse disposal chute or stairwell, and run to the dust extractor, which can in turn be connected to a pre-separator to collect larger particles, if necessary.

Hose Connection Package

Start Box

Part No 8178

Customized installation

The Semi-Mobile System can be customized to a number of building sites, when work is to be carried out on several floors. Below you can see a cross section example of the system on site.

Applied on several floors

The Semi-Mobile System is unique by its easy installation. With just three elements you can build and reconfigure the system to suit your needs. The hose connection package and start boxes are installed on each floor to increase efficiency and to facilitate installation. Dustcontrols powerful DC 5900 gets the job done, and is preferably combined with a pre-separator.

Hose connection package

- Easy to install and connect
- Used on several floors
- Increased efficiency

Start box

- User-friendly
- Efficient use
- Energy efficient
- Installed on every floor

Powerful dust extraction

- Customer specific
- Easy to combine several machines
- Efficient
